

Enculturating the oversized mind

An Egg is a Chicken's way to make another Chicken

This panel illustrates the concept of an egg as a chicken's way to make another chicken. It features a photograph of a white chicken with black wings on the left, a single grey egg in the center, and another identical photograph of the same chicken on the right.

A Chicken is an Egg's way to make another Egg

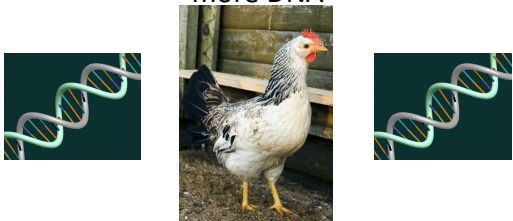

This panel illustrates the concept of a chicken as an egg's way to make another egg. It features a grey egg on the left, a photograph of the same white chicken with black wings in the center, and another grey egg on the right.

DNA is an organism's way to make another organism

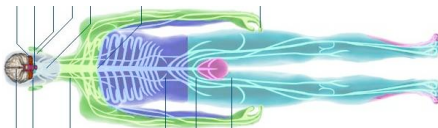

This panel illustrates the concept of DNA as an organism's way to make another organism. It features a photograph of the same white chicken with black wings on the left, a glowing green and blue DNA double helix in the center, and another identical photograph of the same chicken on the right.

The Selfish Gene Flip:
An organism is DNA's way to make more DNA

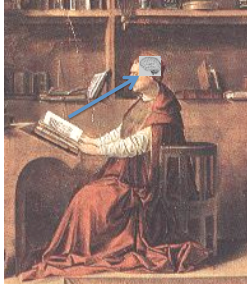

This panel illustrates the concept of an organism as DNA's way to make more DNA. It features a glowing green and blue DNA double helix on the left, a photograph of the same white chicken with black wings in the center, and another identical glowing DNA double helix on the right.

The Embodied Cognition move

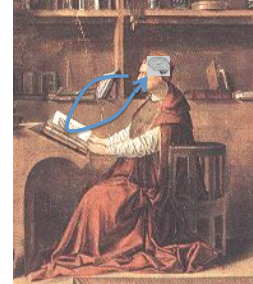

This panel illustrates the concept of embodied cognition. It features a stylized human figure with glowing green and blue internal systems, including the brain, spine, and limbs, representing the integration of mind and body.

The Embedded Cognition move

The Extended Cognition move

The Culturally Extended move

A child born into a cultural world

... and is acquired by a cultural world

... which nurtures and organizes its people

and lives in the activity of its people.

The Brain is culture's way to make more culture?

Culture is cognition's way of making more culture?

Cognition

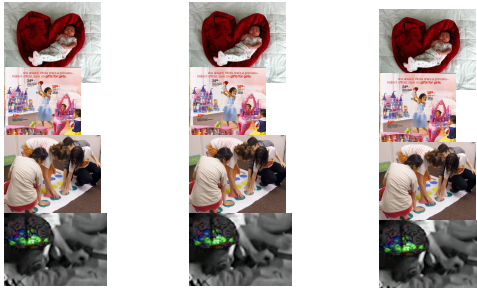

Cognition

A triple flip?

- Culture recruits resources in individuals
- The resources in individuals are shaped to complement (not imitate) cultural processes
- "super-flexible medium that can form functional subsystems that establish and maintain dynamic coordination among constraints imposed by the world of cultural activity, by the body, and by the brain's own prior organization."

An Enculturated cognition Flip

- Cultural practices are the human way of making more culture and cognition.

Hypothesis of Cultural Cognition

- Cultural practices are the human way of organizing cognition.
- Cultural practices are the human way of organizing.
